

Dear Valued Customer,

We hope this message finds you well. We are writing to inform you of an important update regarding our WELDWATCHER® product line. As part of our ongoing commitment to provide you with the best possible solutions, we will discontinue support for WELDWATCHER® versions up to v6. This includes sales, service, development, and bugfixing for these versions.

However, we are excited to introduce you to our latest innovation, the 4D.watcher software, which will replace the WELDWATCHER®. The 4D.watcher software is the successor of our discontinued WELDWATCHER® series. 4D Photonics ensures **compatibility** for most hard- and software interfaces to switch conveniently from WELDWATCHER® to new 4D.watcher software versions. The 4D.watcher software offers numerous advantages that we believe will greatly benefit your operations:

- **Easier operation:** designed with user-friendliness in mind, making it simpler and more intuitive to use
- **Better error detection:** advanced algorithms provide more accurate and reliable error detection
- **Enhanced error classification:** improved classification helps you quickly identify and address issues
- **Shorter jump times:** for demanding and fast laser processes such as battery welding and bipolar plates
- **Extended data acquisition:** with the multispectral sensor 4D.TWO®

We understand that transitioning to a new system can be challenging, but we are confident that the 4D.watcher software will provide you with a superior experience and help you achieve better results in your laser applications.

To help you explore the benefits of the 4D.watcher software for your specific needs, we would like to offer you a **personalized consultation**. Our team of experts is ready to assist you in understanding how the 4D.watcher software can enhance your operations and deliver the best possible outcomes.

Please do not hesitate to contact us to schedule your consultation or if you have any questions or concerns. We are here to support you every step of the way.

Thank you for your continued trust and partnership. We are looking forward to help you achieve even greater success with the 4D.watcher software.

Best regards,
